GLASS LXE

All of the functionality of our hardware LXE on a GLASS touchscreen control surface

Glass LXE is a multi-touch UI that operates as a standalone virtual console into the WheatNet-IP audio network, a complete IP audio ecosystem of consoles, talent stations, I/O units, accessories, and appliances.

Similar in function, feel and layout to the network's flagship LXE hardware control surface, Glass LXE is fully functional and studio-ready as a user interface with familiar buttons, knobs and multi-touch navigation and menuing for setting EQ curves, filtering and other custom settings. As a standalone multi-touch console interface into the WheatNet-IP audio network, Glass LXE can be used anywhere there's a PC touchscreen or several touchscreens connected over that network. You can run it on a laptop or

on multiple PC screens from a cloud. Glass LXE can be used alone or combined with the physical LXE surface to give broadcasters full console control anywhere that's needed on a UI that is very familiar.

Glass LXE works with a mix engine to handle mixing and processing as part of the WheatNet-IP audio network. The virtual console is one of several new WheatNet-IP product additions, adding to the hundreds of software and hardware elements that make up the WheatNet-IP audio network, any of which can be connected together for any sized operation or purpose. WheatNet-IP is a complete AoIP infrastructure that includes AES67 compatibility.

Glass LXE is modeled after WheatNet-IP's flagship LXE console, which is known for its flexibility as a reconfigurable, compact control surface that is available in one main frame or in split-frame configuration for multiple operators.

For more information on the functionality of GLASS LXE, please see the Wheatstone LXE Brochure or go to wheatstone.com/lxe
